

Healthcare Access Is Broken

Remote Areas Left Behind

Specialists are concentrated in cities, leaving rural patients without expert care.

Doctors Without a Platform

Retired or offline doctors have no viable channel to contribute their expertise.

Costly Onboarding

Existing apps charge doctors and patients just to get started — a barrier to entry.

Complex Cases Go Unresolved

Multi-specialty collaboration is rare. Complex diagnoses fall through the cracks.

Who Doc-Talk Serves

Patients

Affordable, accessible consultations from anywhere — no travel, no wait, no onboarding fees.

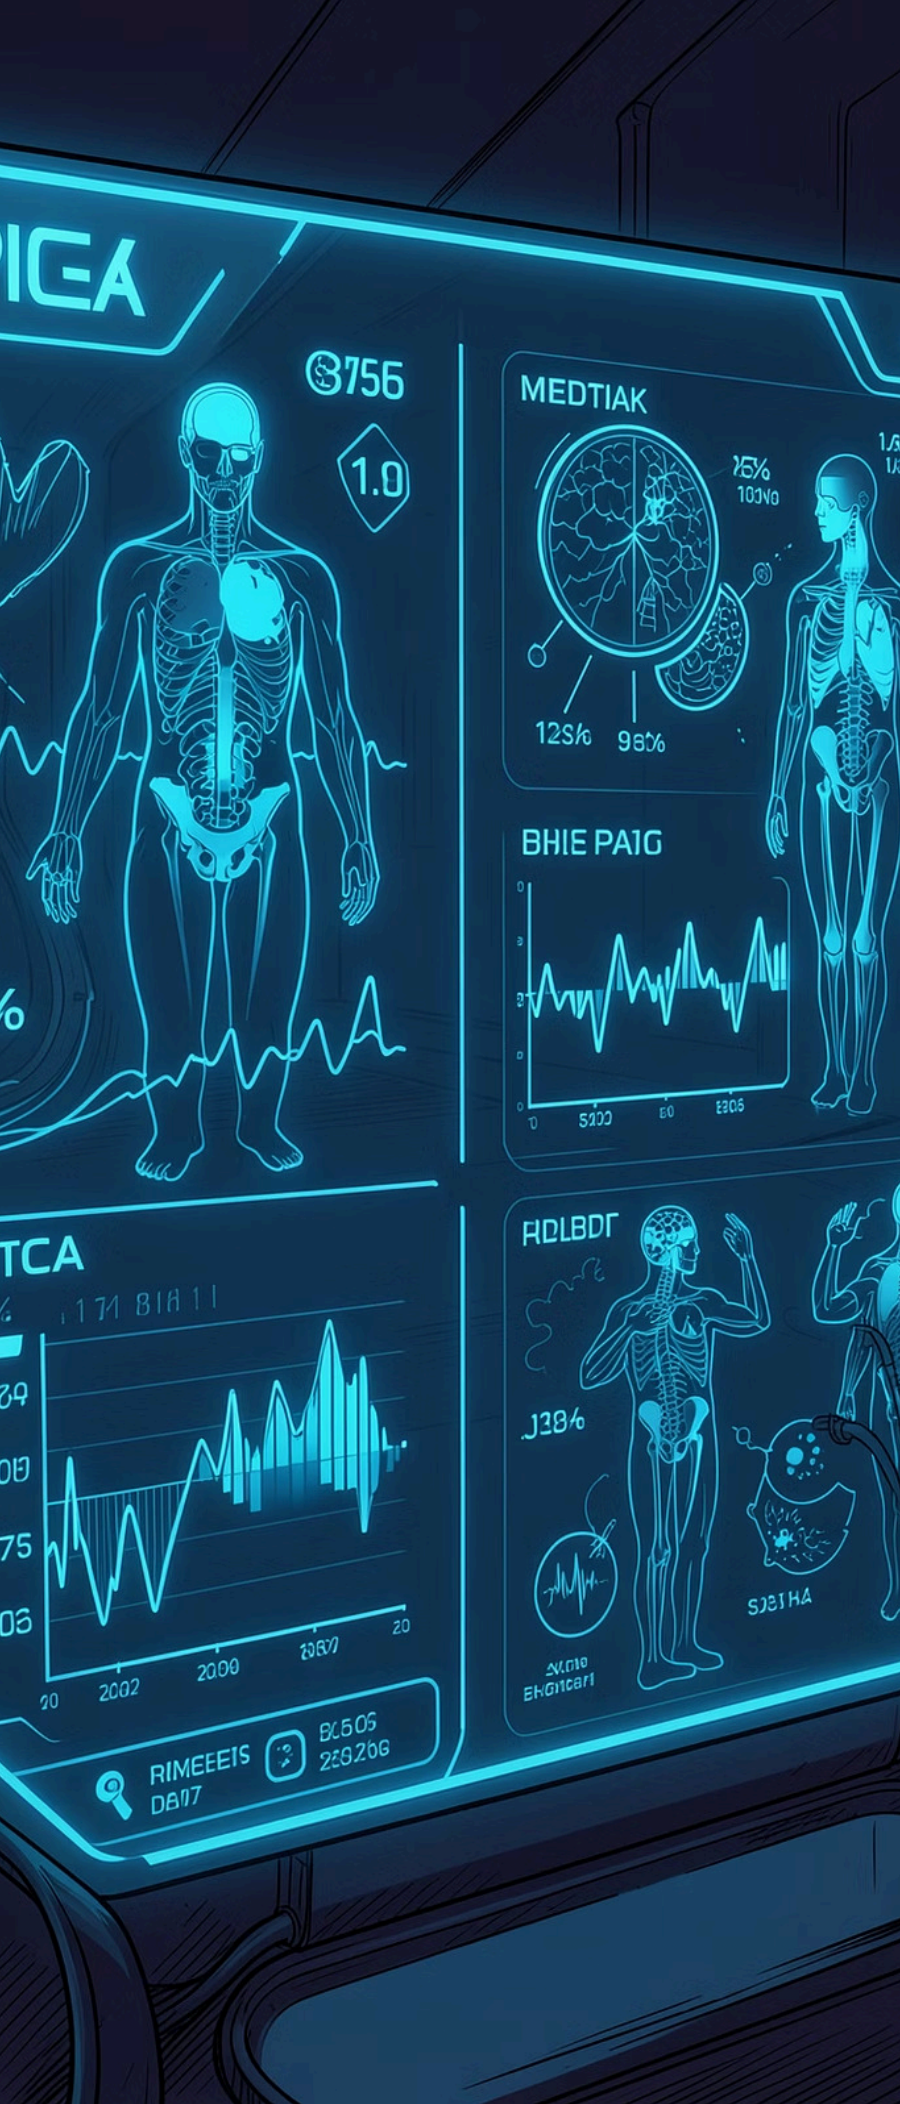

Doctors

Active, retired, or temporarily offline physicians can consult flexibly and earn on their terms.

Specialists

Join focused 3–7 minute consults for overlapping domains — high impact, low time commitment.

The Doc-Talk Solution

Innovation meets empathy — a platform built for real healthcare challenges.

AI Patient History

Chatbot records and summarizes patient history automatically.

Doctor-to-Doctor

Seamless specialist collaboration for complex, multi-domain cases.

AI Anonymization

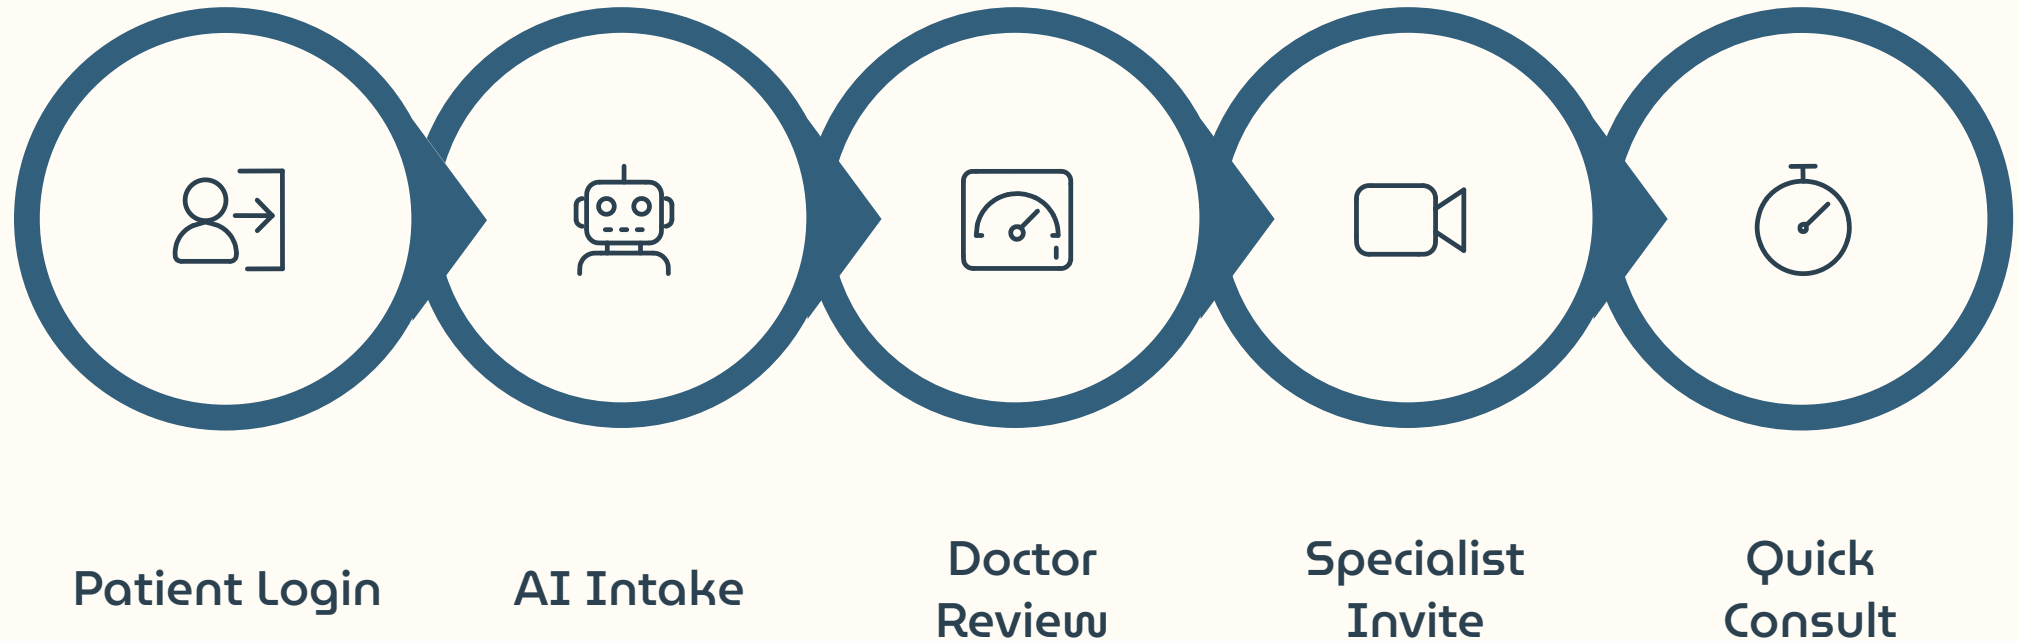

Patient identity hidden during specialist consults — privacy by design.

Zero Onboarding Fees

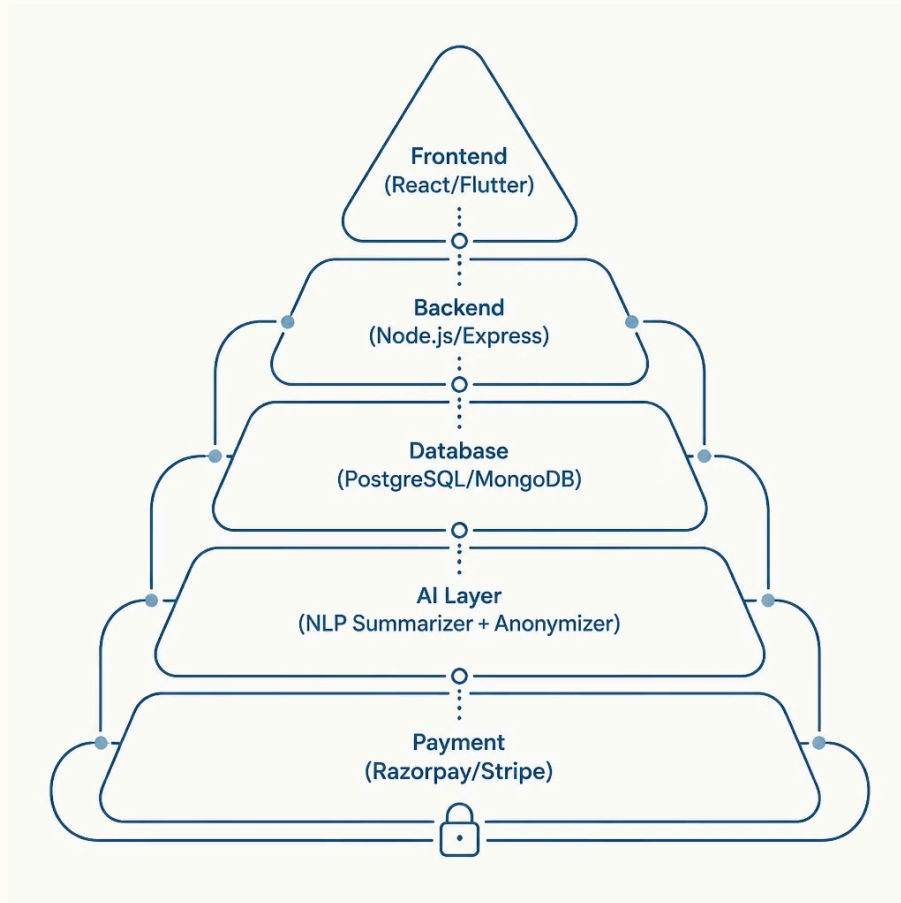

No fees for patients or doctors. Healthcare should be open to all.

How Doc-Talk Works

From first symptom to specialist insight — Doc-Talk orchestrates every step in under 10 minutes.

Technical Architecture

Built for Scale & Privacy

Every layer of Doc-Talk's architecture is chosen for reliability, security, and real-world performance.

Frontend

React / Flutter for cross-platform responsiveness

Backend

Node.js / Express API layer

AI Layer

NLP summarizer + patient anonymizer

Real-World Impact

3–7min

Specialist Consult Time

Focused, efficient expert input without disrupting schedules.

\$0

Onboarding Cost

No fees for patients or doctors to join the platform.

100%

AI-Anonymized

Every specialist consult preserves patient privacy by default.

Meet the Team

Driven by product thinking, technical excellence, and a shared mission to expand healthcare access.

1

Daksh Shastri

Full Stack Developer

Builds and maintains the end-to-end product experience, from responsive user interfaces to secure backend systems.

2

Vidushi Rhanna

Product Developer and Designer

Shapes the product vision through user-centered design, clear workflows, and polished experiences for patients and doctors.

Prototype Status: Working prototype ready — full patient-to-specialist flow live.
